PROJECT TOPIC

Art Gallery Management System to manage the exhibition of the galleries by the artist with MySQL Database and PHP framework

Abstract:

The main aim of this project is to help art lovers know about different exhibition details organised by different organisation, the art work included and the artists. This project intends to include various features related to an art gallery i.e. information about Gallery, Exhibition, Artists, their paintings, Customers (the one who bought the paintings) etc. People who wish to buy this art work can very easily contact the artist. There is a login page for artist, administrator and customer. Artist can login through their account and can include the details of the new paintings made by them. Customers can login through their account and can see different paintings available for selling purpose. Administrator can update details about new art gallery, upcoming exhibition details and the exhibition artists.

The main aim of this project is to apply the knowledge the of MySQL taught under DBMS Subject in real life project by creating Art Gallery Management System that keeps record of artists, their paintings, art gallery details, exhibition details and showcases pictures of painting to customers.
